Kirby Building Systems wins award for implementing the Largest PEB Structure in the world, Renault-Nissan Factory, Chennai, India

Renault Nissan Factory, Chennai, India

Kirby Building Systems has won the prestigious 'Infrastructure Excellence Award 2011' in the category - 'PEB project of the Year'. The company won the award for successful implementation of the single largest PEB building in the world, "Renault Nissan Automotive Ltd." The project involved over 20,000 MT of steel with a covered area of more than 300,000 square meters.

The Renault Nissan project is the first of its kind to utilise PEB structures for the entire automobile plant in India. The scheme of alternate technical offer versus the original scope of work reduced the tonnage and saved a substantial amount for the customer which is the main factor for securing the order. For the first time, a combined erection procedure was successfully implemented at the site. This project required not only superior design but also flawless project management from start to finish. Kirby delivered on its commitment to excellence and confirmed its reputation as the supplier of choice for PEB and structural steel mega projects.
